

Biodiversity Credits Market Sales Dashboard video transcript

The Biodiversity Credits Market Sales Dashboard is now available on SEED.

This dashboard is for credits created under the Biodiversity Assessment Method (BAM). You can use this dashboard as a searchable tool to view historical sales and market trends. On the dashboard page, you can find related resources including:

- FAQs
- User guide
- Related datasets
- Biodiversity Offset Scheme Public Registers.

(Video showing preview of dashboard webpage)

The dashboard presents information on the market performance overview, latest price for ecosystem credits, and the latest price for species credits.

The latest price is the price at which either an ecosystem or species credit was bought, sold or transferred.

It can be used to support:

- Consideration of the feasibility of a Biodiversity Stewardship Agreement
- Business planning for developments
- Costing or pricing biodiversity credits.

Navigate the dashboard by clicking on any of the tiles on the main homepage.

You can also hover the mouse over the centre page numbers to navigate to the other sections.

(Video showing demonstration of navigating the dashboard)

The market performance overview presents data on biodiversity and credit transactions.

This includes:

- Price
- Number of market transactions
- Volume of credit transfer
- The total market value.

You can refine the search result by adjusting the chart options.

SEED is focused on continuous improvement and your feedback is important to us. Help us improve this dashboard by completing the survey on page 5 of the dashboard.
